

# mdcomp

## A rudimentary PDF compiler for my Markdown notes

Compiles my **Markdown notes** into a **PDF subset** without needing to sync and use Obsidian or other tools. While a utility, this project primarily serves as a way to learn C.

### Markdown

- Headings
- Formatting
- Regular lists (BUT not numbered lists)
- Horizontal lines

### Example with defaults

```
```bash
make all
make run
make rebuild
```
```
