

note-compiler for compiling my own
Markdown notes and assignments
(without Obsidian)

A simple Markdown compiler to a **PDF spec subset**

- **Refactor the renderer**
- Word-wrapping
- **non-ASCII**
- **Multipage**
- Bolded, italic text
- CMake
- `compilecommands.json`
- SV struct helpers
- .h files -> compilation units, linking
- *const chars*

[illegible]
